GCSE GEOGRAPHY

Paper 1: Living with the physical environment

Topic 1: The challenge of natural hazards

Practice questions in the style of AQA GCSE Geography (8035). Every question is original; the layout, command words, mark allocations (including levels-based 6- and 9-mark questions with SPaG) and mark scheme follow the real exam format. Figures and data are illustrative and simplified for practice; case-study facts in the mark scheme are summarised, so check them against your own case-study notes.

Time allowed	About 135 minutes (roughly 1 minute per mark)
Materials	For this paper you must have: a black pen, a pencil, a ruler, a calculator and (for some questions) a protractor.
Instructions	• Use black ink or black ball-point pen. Use pencil only for drawing. • Answer **all** questions. • You must answer the questions in the spaces provided. • Do all rough work in this book. Cross through any work you do not want to be marked. • Questions that carry a **SPaG** note are also marked for spelling, punctuation, grammar and the use of specialist terminology.
Information	• The maximum mark for this paper is **129**. • The marks for questions are shown in brackets. • Questions that start with the command word *Explain* need developed points (a point plus a reason or consequence). • 6- and 9-mark questions are marked by **levels**: aim to give a detailed, balanced and well-linked answer, using place-specific detail.

Name: _____ Date: _____ Mark: _____ / 129

Section A: The challenge of natural hazards

Answer all questions in this section.

0 1 This question is about natural hazards and tectonic hazards.

0 1 . 1 What is a **natural hazard**? **[1 mark]**

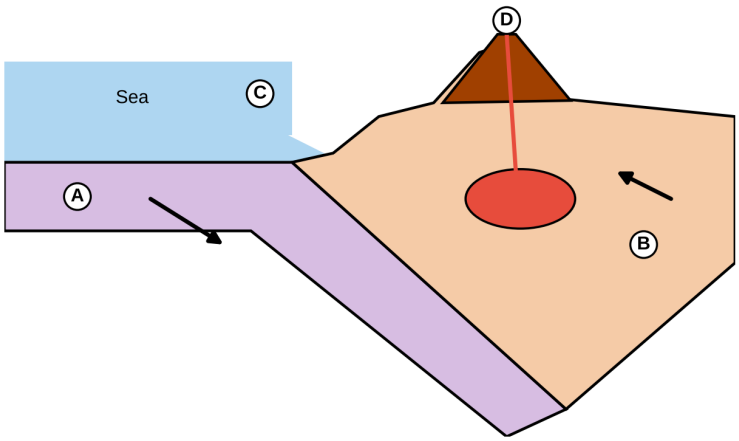

*Tick **one** box.*

- [ ] a natural event that threatens people or property
- [ ] an event that always causes deaths
- [ ] any disaster caused by humans
- [ ] a hazard that only happens in poor countries

0 1 . 2 Give **two** factors that affect the risk of a natural hazard to a population. **[2 marks]**

0 1 . 3 Name the type of plate margin shown in **Figure 1**. **[1 mark]**

Figure 1

0 1 . 4 Name the features labelled **C** and **D** on Figure 1. **[2 marks]**

0 1 . 5 Explain why volcanoes form at this type of plate margin. **[4 marks]**

0 1 . 6 Explain why earthquakes occur at plate margins. **[3 marks]**

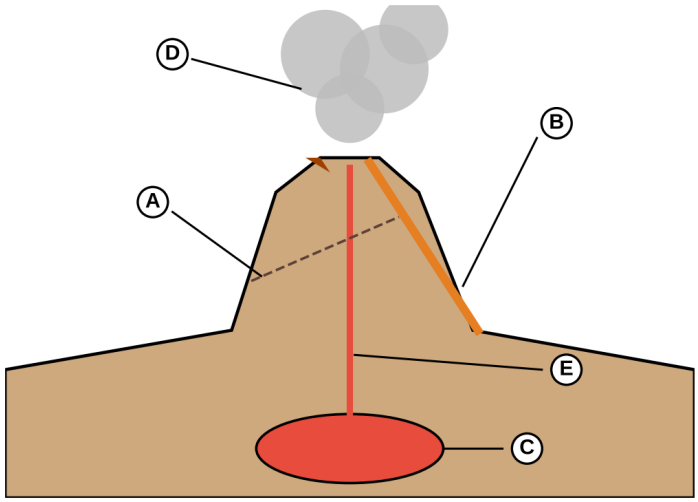

0 1 . 7 Which type of plate margin has earthquakes but **no** volcanoes? **[1 mark]**

*Tick **one** box.*

- ☐ constructive
- ☐ conservative
- ☐ destructive
- ☐ collision

0 1 . 8 **Figure 2** shows a composite volcano. Which letter shows the magma chamber? **[1 mark]**

Figure 2

*Tick **one** box.*

- [ ] A
- [ ] B
- [ ] C
- [ ] D

0 1 . 9 Give **one** primary effect and **one** secondary effect of a volcanic eruption. **[2 marks]**

0 2 Earthquakes affect countries at different levels of development. **Figure 3** compares two earthquakes.

0 2 . 1 Compare the effects of the two earthquakes shown in Figure 3. **[3 marks]**

Figure 3

	Nepal (2015)	**L'Aquila, Italy (2009)**
Magnitude	7.8	6.3
Depth of focus	about 8 km	about 10 km
Deaths	about 9 000	about 300
People injured	about 22 000	about 1 600
Homes destroyed or made unsafe	over 500 000	about 20 000

0 2 . 2 Explain why the effects of the earthquake in Nepal were greater than the effects of the earthquake in Italy. **[4 marks]**

0 2 . 3 Describe **two** immediate responses to an earthquake you have studied. **[4 marks]**

0 2 . 4 **Figure 4** shows an earthquake-resistant building. Explain how the cross-bracing (**B**) and the rubber shock absorbers (**C**) help to reduce the effects of an earthquake. **[4 marks]**

Figure 4

0 2 . 5 Explain how people can reduce the effects of tectonic hazards by **planning**, **protection** and **preparation**. **[6 marks]**

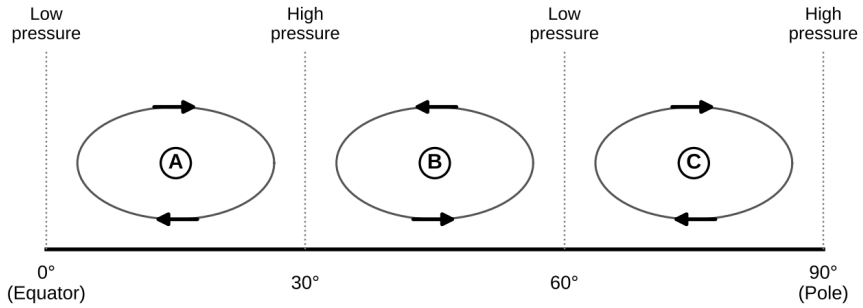

0 2 . 6 **'Preparing for tectonic hazards is more effective than trying to predict them.'** To what extent do you agree with this statement? Use evidence from named tectonic hazard(s) you have studied. **[9 marks] + [3 marks] SPaG**

Spelling, punctuation, grammar and use of specialist terminology [3 marks]

0 3 This question is about global atmospheric circulation and tropical storms.
Figure 5 shows the three circulation cells in the northern hemisphere.

0 3 . 1 Name the circulation cells labelled **A** and **B** on Figure 5. **[2 marks]**

Figure 5

0 3 . 2 Explain why there is a belt of low pressure at the Equator and high pressure at 30° north. **[4 marks]**

0 3 . 3 At what sea temperature do tropical storms form? **[1 mark]**

*Tick **one** box.*

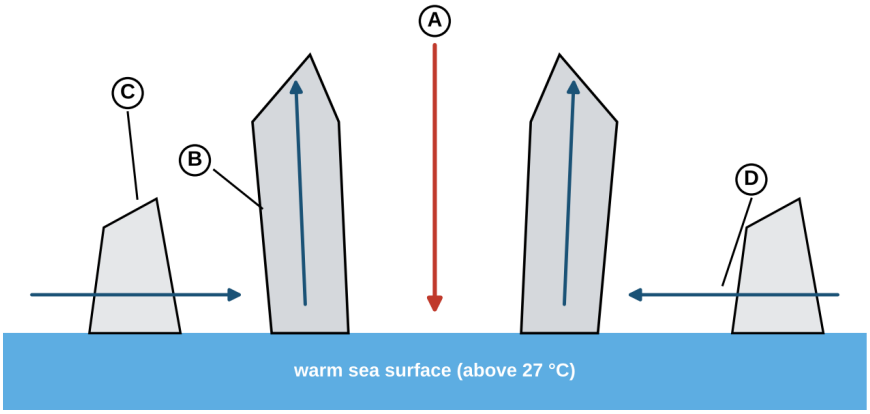

- ☐ above 10 °C
- ☐ above 15 °C
- ☐ above 27 °C
- ☐ above 40 °C

0 3 . 4 Describe the distribution of tropical storms. **[3 marks]**

0 3 . 5 Explain why tropical storms do **not** form on the Equator. **[2 marks]**

0 3 . 6 **Figure 6** shows a cross-section through a tropical storm. Describe what happens in the eye (**A**) and in the eye wall (**B**). **[4 marks]**

Figure 6

0 3 . 7 Explain how a tropical storm forms. **[4 marks]**

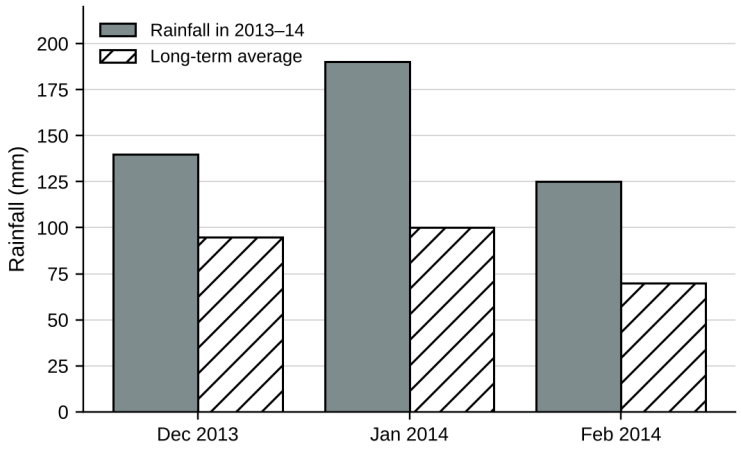

0 3 . 8 Describe the primary and secondary effects of a tropical storm you have studied. **[4 marks]**

0 3 . 9 Evaluate the effectiveness of the immediate and long-term responses to a tropical storm you have studied. **[6 marks]**

0 4 This question is about weather hazards in the UK. **Figure 7** shows the rainfall at a weather station in Somerset in the winter of 2013–14, compared with the long-term average.

0 4 . 1 In which month was the rainfall furthest above the average? **[1 mark]**

Figure 7

*Tick **one** box.*

- ☐ December 2013
- ☐ January 2014
- ☐ February 2014

0 4 . 2 Calculate how many times greater the rainfall in January 2014 was than the average for January. Give your answer to 1 decimal place. **[2 marks]**

Answer = _____ times

0 4 . 3 Describe the pattern of rainfall shown in Figure 7. **[3 marks]**

0 4 . 4 Suggest why flooding became more likely during this period. **[2 marks]**

0 4 . 5 Give **two** impacts of a UK extreme weather event you have studied. **[2 marks]**

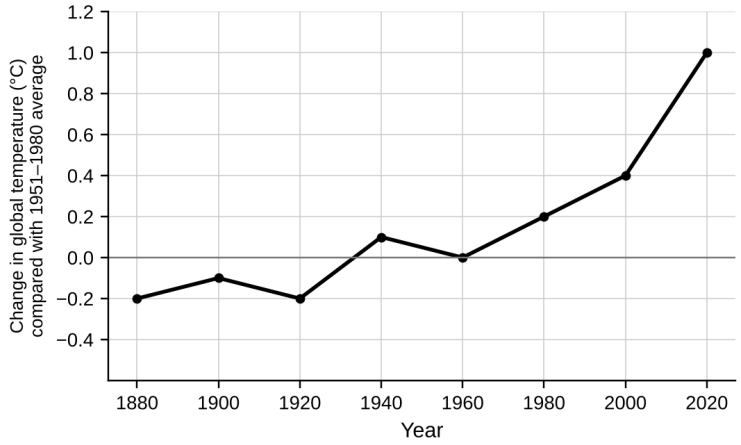

0 4 . 6 Explain the causes and effects of a UK extreme weather event you have studied. **[6 marks]**

0 4 . 7 Describe how weather forecasts can help to reduce the impacts of extreme weather. **[2 marks]**

0 5 This question is about climate change. **Figure 8** shows how global average temperature has changed since 1880.

0 5 . 1 What was the change in global temperature between 1980 and 2020? **[1 mark]**

Figure 8

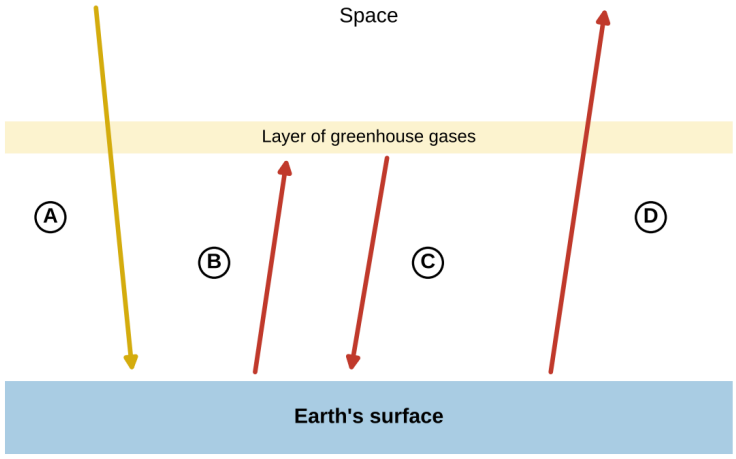

0 5 . 2 Describe the trend shown in Figure 8. **[3 marks]**

0 5 . 3 Give **two** pieces of evidence, other than temperature records, that show the climate is changing. **[2 marks]**

0 5 . 4 Describe **two** natural causes of climate change. **[4 marks]**

0 5 . 5 **Figure 9** shows the greenhouse effect. Which letter shows heat being sent back to the Earth by greenhouse gases? **[1 mark]**

Figure 9

*Tick **one** box.*

- [ ] A
- [ ] B
- [ ] C
- [ ] D

0 5 . 6 Explain how human activities have made the greenhouse effect stronger (the enhanced greenhouse effect). **[4 marks]**

0 5 . 7 Explain how **carbon capture** and **changing farming practices** can help to manage climate change. **[4 marks]**

0 5 . 8 **'Climate change can only be managed if all countries work together.'** **[9 marks]**
To what extent do you agree with this statement? **+ [3 marks]**
SPaG

Spelling, punctuation, grammar and use of specialist terminology [3 marks]

END OF QUESTIONS

MARK SCHEME – Topic 1: The challenge of natural hazards

How to use this mark scheme: mark your own work in a different colour. A semicolon (;) separates marking points and each is worth one mark unless stated. A slash (/) separates alternative answers that are equally acceptable. Words in brackets are not needed to gain the mark. **Allow** = acceptable; **Ignore** = neither credited nor penalised; **Do not accept** = contradicts or spoils the answer. Marks are for the *geography*, not the wording.

Question	Answers	Extra information	Mark	AO / Spec. Ref.
01.1	a natural event that threatens people (and/or property)	Tick box 1 is correct.	1	AO1 3.1.1.1
01.2	vulnerability of the population (e.g. poverty, poor housing) ; capacity to cope (e.g. preparedness, emergency services, governance) ; nature of the hazard (e.g. magnitude, frequency, predictability) ; population density / number of people living in the hazard zone ;	Any two. Allow 'level of development' for one mark.	2	AO1 3.1.1.1
01.3	destructive (margin) / convergent / subduction zone		1	AO1 3.1.1.2
01.4	C: ocean trench ; D: (composite / explosive) volcano ;		2	AO1 3.1.1.2
01.5	the oceanic plate is denser (than the continental plate) ; so it sinks / is subducted beneath the continental plate ; the plate melts as it goes down into the hot mantle, forming magma ; magma is less dense / under pressure so rises through cracks (vents) ; erupts at the surface to form a volcano ;	Up to 4 marks. One mark for each correct point; development shown by 'so' or 'because'.	4	AO1 3.1.1.2
01.6	plates move (past / towards each other) but get stuck / friction ; pressure builds up ; the plates suddenly slip / the pressure is released, causing shock (seismic) waves ;		3	AO1 3.1.1.2
01.7	conservative	Tick box 2 is correct.	1	AO1 3.1.1.2
01.8	C		1	AO1 3.1.1.2
01.9	primary: lava flows destroy buildings / ash buries land / people killed by pyroclastic flows / gases ; secondary: lahars (mudflows) / fires / loss of income (farming/tourism) / disease / disruption to flights ;		2	AO1 3.1.1.2

Question	Answers	Extra information	Mark	AO / Spec. Ref.
02.1	more deaths in Nepal (about 9 000 compared with about 300) ; more injuries / more homes destroyed in Nepal than Italy ; the earthquake in Nepal had a higher magnitude (7.8 compared with 6.3) ; use of figures to support ;	Data are approximate and for practice. Any three comparisons with figures for 3 marks.	3	AO3 3.1.1.2
02.2	Nepal's earthquake was more powerful / higher magnitude ; Nepal is a poorer country so buildings were poorly built (not earthquake-resistant) ; so they collapsed easily, causing more deaths / injuries ; remote mountain areas hard to reach, so rescue was delayed ; weaker emergency services / fewer resources to respond ; triggered landslides / avalanches (secondary effects) ;	Up to 4 marks. Must be comparative to gain full marks.	4	AO2 3.1.1.2
02.3	named example e.g. Nepal 2015 / L'Aquila 2009 ; search and rescue teams looked for survivors in collapsed buildings ; field hospitals / medical aid set up to treat the injured ; emergency shelter (tents) provided for homeless people ; food, water and blankets distributed (by aid agencies / international aid) ;	Two responses, each 1 mark for the response + 1 mark for description/detail. Case-study detail needed for full marks.	4	AO1 3.1.1.2
02.4	B: steel cross-bracing strengthens the structure ; so the building resists twisting / bending and is less likely to collapse ; C: rubber absorbs / dampens the shaking from the ground ; so less energy is passed to the building, reducing damage ;	Allow A: weight on the roof moves against the swaying; D: deep foundations anchored in bedrock; E: strong reinforced frame.	4	AO2 3.1.1.2
02.5	**Level 3 (5–6 marks)**: Detailed, accurate and relevant knowledge and understanding of the topic. Clear, well-developed and logically structured explanation/analysis with specific links made between ideas (and a use of place detail or the resources where asked). **Level 2 (3–4 marks)**: Some relevant and accurate knowledge and understanding. Some explanation/analysis, but developed unevenly or with limited links. Some use of detail or the resources. **Level 1 (1–2 marks)**: Basic, general knowledge with limited accuracy or relevance. Simple statements; little or no explanation or use of detail. **0 marks**: No relevant content.		6	AO1/AO2 3.1.1.2

Question	Answers	Extra information	Mark	AO / Spec. Ref.
	Indicative content (credit any other valid geography, and place-specific detail): • planning: land-use zoning keeps important buildings / housing away from the hazard zone ; • hazard maps / evacuation routes planned ; • protection: earthquake-resistant buildings (see Figure 4) ; lava diversion channels ; retrofitting older buildings ; • preparation: earthquake drills; emergency kits; public education ; • monitoring and prediction (seismometers, gas / ground tilt measurements) give warnings ; • emergency services trained and equipped ; • linked evaluation: prediction of earthquakes is not yet reliable, so protection and preparation matter most ;			
02.6	**Level 3 (7–9 marks)**: Detailed, accurate knowledge and understanding of the topic with a well-developed, balanced and logical argument. A clear, supported **evaluation/judgement** that is based on evidence (and specific place detail or the resources where asked). Any conclusion is fully justified. **Level 2 (4–6 marks)**: Some accurate knowledge and understanding. Some development of ideas with evidence; the judgement/evaluation is partial, unbalanced or not fully supported. **Level 1 (1–3 marks)**: Limited knowledge and understanding. Simple statements with little development; a judgement, if any, is unsupported. **0 marks**: No relevant content.		9 + 3 SPaG	AO1/AO2/AO3 3.1.1.2

Question	Answers	Extra information	Mark	AO / Spec. Ref.
	Indicative content (credit any other valid geography, and place-specific detail): • Agree: earthquakes cannot be reliably predicted (e.g. L'Aquila scientists could not forecast the 2009 earthquake) ; preparation (building codes, drills, emergency plans) reduces deaths whether or not a warning is given ; • Agree: in Nepal, many buildings collapsed because they were not designed for earthquakes – preparation (strengthened buildings, education) would have saved lives ; • Disagree/balance: volcanoes can often be predicted by monitoring (gas emissions, small earthquakes, ground bulging) so people can be evacuated in time ; prediction is cheaper than rebuilding ; • Balance: prediction + preparation + planning work together; LICs cannot afford expensive preparation, so aid / international help is needed ; • Judgement: a conclusion on which is more effective, supported with named example detail (e.g. Nepal 2015, L'Aquila 2009, Mount Merapi / Montserrat) ;			
	SPaG (3 marks) – award separately: **High performance (3)**: Learners spell and punctuate with consistent accuracy and consistently use rules of grammar; they use a wide range of specialist terms adeptly and with precision. **Intermediate performance (2)**: Learners spell and punctuate with considerable accuracy and use rules of grammar with general control; they use a good range of specialist terms with facility. **Threshold performance (1)**: Learners spell and punctuate with reasonable accuracy and use rules of grammar with some control; they use a limited range of specialist terms appropriately. **0 marks**: No marks awarded: no response or the spelling, punctuation and grammar is too weak, or the terminology is not relevant.			
03.1	A: Hadley (cell) ; B: Ferrel (cell) ;		2	AO1 3.1.1.3
03.2	at the Equator the Sun's rays are most direct / the surface is heated most ; warm air rises (convection) leaving low pressure at the surface ; the air cools as it rises, condenses and forms clouds and heavy rain ; at 30° the air cooled at height sinks ; sinking air creates high pressure, giving dry, cloudless conditions (e.g. hot deserts) ;		4	AO2 3.1.1.3

Question	Answers	Extra information	Mark	AO / Spec. Ref.
03.3	at least 27 °C	Tick box 3 is correct.	1	AO1 3.1.1.3
03.4	form (and affect) areas between about 5° and 30° north and south of the Equator ; form over warm tropical oceans / in the tropics (e.g. Atlantic, Pacific, Indian Ocean) ; not found near the Equator itself (within 5°) or in the polar regions ; named regions e.g. Caribbean / South-east Asia / Gulf of Mexico / Bay of Bengal ;		3	AO1 3.1.1.3
03.5	the Coriolis effect (force from Earth's rotation) is too weak (at the Equator) ; so the storm cannot spin / the winds cannot circulate ;		2	AO2 3.1.1.3
03.6	A: air sinks (in the eye) ; so skies are clear and the winds are light / it is calm ; B: air rises rapidly (on the edge of the eye) ; forming tall storm clouds with the strongest winds and heaviest rain ;		4	AO1 3.1.1.3
03.7	warm (27 °C+) sea heats the air above it, which rises / evaporation ; low pressure forms at the surface and air is drawn in (trade winds) ; the rising warm air cools, condenses and forms huge cumulonimbus clouds, releasing latent heat ; the Coriolis effect makes the storm spin ; air sinks in the centre forming the eye ;		4	AO1 3.1.1.3
03.8	named example e.g. Typhoon Haiyan (Philippines, 2013) ; primary: strong winds / heavy rain / storm surge destroyed houses and infrastructure ; thousands killed (about 6 000+) ; secondary: flooding of low-lying areas (Tacloban) ; disease from contaminated water ; loss of crops / jobs ; millions displaced; shortages of food and clean water ;		4	AO1 3.1.1.3

Question	Answers	Extra information	Mark	AO / Spec. Ref.
03.9	**Level 3 (5–6 marks)**: Detailed, accurate and relevant knowledge and understanding of the topic. Clear, well-developed and logically structured explanation/analysis with specific links made between ideas (and a use of place detail or the resources where asked). **Level 2 (3–4 marks)**: Some relevant and accurate knowledge and understanding. Some explanation/analysis, but developed unevenly or with limited links. Some use of detail or the resources. **Level 1 (1–2 marks)**: Basic, general knowledge with limited accuracy or relevance. Simple statements; little or no explanation or use of detail. **0 marks**: No relevant content.		6	AO1/AO3 3.1.1.3
	Indicative content (credit any other valid geography, and place-specific detail): • immediate: international aid (food, water, tents, medical teams) ; search and rescue ; evacuation before landfall ; emergency shelters ; • long-term: rebuilding homes and infrastructure ; early-warning systems / storm shelters ; mangrove replanting and sea defences ; new building codes ; • effectiveness: warning and evacuation saved lives ; aid reached some places slowly because roads and airports were damaged ; many people still homeless months later ; poorer areas recovered more slowly ; • evaluative judgement: immediate responses were vital but long-term preparation is more effective at preventing future loss ; • named place detail (e.g. Haiyan, Tacloban, UN appeal, Red Cross) ;			
04.1	January (2014)	Tick box 2 is correct.	1	AO3 3.1.1.3
04.2	190 ÷ 100 ; 1.9 ;	Correct answer with no working gains 2 marks.	2	AO4 3.1.1.3
04.3	rainfall was above the average in all three months ; highest in January (190 mm) and lowest in February (125 mm) ; difference was biggest in January (+90 mm) and smallest in December (+45 mm) ; use of figures from the graph ;	Allow February difference +55 mm. Any three marking points.	3	AO3 3.1.1.3
04.4	soil / ground became saturated (could not absorb more water) ; so more water ran off as surface runoff into rivers ; rivers could not hold the extra water and overflowed (low-lying land) ;		2	AO2 3.1.1.3

Question	Answers	Extra information	Mark	AO / Spec. Ref.
04.5	named event e.g. Somerset Levels flooding (2013–14) ; social: homes flooded / people evacuated / roads and villages cut off ; economic: farmland flooded / livestock lost / businesses closed / insurance costs ; environmental: wildlife habitats damaged / sewage pollution ;	1 mark for each of two impacts, with place detail.	2	AO1 3.1.1.3
04.6	**Level 3 (5–6 marks)**: Detailed, accurate and relevant knowledge and understanding of the topic. Clear, well-developed and logically structured explanation/analysis with specific links made between ideas (and a use of place detail or the resources where asked). **Level 2 (3–4 marks)**: Some relevant and accurate knowledge and understanding. Some explanation/analysis, but developed unevenly or with limited links. Some use of detail or the resources. **Level 1 (1–2 marks)**: Basic, general knowledge with limited accuracy or relevance. Simple statements; little or no explanation or use of detail. **0 marks**: No relevant content.		6	AO1/AO2 3.1.1.3
	Indicative content (credit any other valid geography, and place-specific detail): • named event and when (e.g. Somerset Levels 2013–14 / Beast from the East 2018 / 2022 heatwave) ; • causes: very heavy and prolonged rain from a series of Atlantic depressions ; low-lying flat land ; rivers silted up / not dredged ; high tides stopped rivers draining ; • effects: social – homes flooded, people evacuated, villages cut off for weeks, stress ; • effects: economic – farmland and livestock lost, businesses and tourism affected, repair costs ; • effects: environmental – habitats flooded, contaminated water ; • responses: dredging, pumping, temporary defences, raising road levels ;			
04.7	warnings (Met Office) give people time to prepare / evacuate ; so people can move belongings / protect homes (sandbags) and emergency services can prepare ;		2	AO1 3.1.1.3
05.1	0.8 (°C) rise / increase	Allow 0.7–0.9 °C rise. Must show a rise.	1	AO3 3.1.1.4

Question	Answers	Extra information	Mark	AO / Spec. Ref.
05.2	overall increase (from about −0.2 °C to +1.0 °C) ; slow / small change before 1940 (some small falls, e.g. 1900–1920) ; temperatures rose faster after 1980 / increase is most rapid after 2000 ; a small fall around 1960 ;		3	AO3 3.1.1.4
05.3	ice cores (show past CO_2 and temperature) ; retreating glaciers / melting ice caps and sea ice ; rising sea levels ; changes in seasons / migration / flowering dates ; tree rings / pollen records (past climate) ;	Any two.	2	AO1 3.1.1.4
05.4	orbital changes: the Earth's orbit and tilt vary over thousands of years, changing the amount of heat received (Milankovitch cycles) ; volcanic eruptions: ash and gases block sunlight, cooling the Earth for a time ; sunspots / changes in solar output: more sunspots = more energy reaching Earth ;	Any two, each with 1 mark for naming and 1 for description.	4	AO1 3.1.1.4
05.5	C	A: incoming short-wave radiation; B: heat from Earth rising; C: heat trapped and sent back (by greenhouse gases); D: heat escaping to space.	1	AO2 3.1.1.4
05.6	burning fossil fuels (power stations / transport) releases CO_2 ; farming (cattle and rice paddies) releases methane ; deforestation reduces the amount of CO_2 absorbed (photosynthesis) ; more greenhouse gases trap more heat in the atmosphere, so the Earth warms ;		4	AO1 3.1.1.4
05.7	carbon capture: CO_2 from power stations is trapped / stored underground ; so less carbon dioxide is released into the atmosphere (mitigation) ; changing farming: growing drought-resistant / heat-tolerant crops, changing planting times, better irrigation ; so food supply is protected as the climate changes (adaptation) ;		4	AO2 3.1.1.4

Question	Answers	Extra information	Mark	AO / Spec. Ref.
05.8	**Level 3 (7–9 marks)**: Detailed, accurate knowledge and understanding of the topic with a well-developed, balanced and logical argument. A clear, supported **evaluation/judgement** that is based on evidence (and specific place detail or the resources where asked). Any conclusion is fully justified. **Level 2 (4–6 marks)**: Some accurate knowledge and understanding. Some development of ideas with evidence; the judgement/evaluation is partial, unbalanced or not fully supported. **Level 1 (1–3 marks)**: Limited knowledge and understanding. Simple statements with little development; a judgement, if any, is unsupported. **0 marks**: No relevant content.		9 + 3 SPaG	AO1/AO2/AO3 3.1.1.4
	Indicative content (credit any other valid geography, and place-specific detail): • Agree: climate change is a global problem – emissions in one country affect everyone, so international agreements (Kyoto Protocol, Paris Agreement 2015) set targets ; countries share technology and funds ; • Agree: LICs cannot afford mitigation / adaptation alone – need finance and technology transfer from richer countries ; • Disagree/balance: individuals and local action also matter – recycling, using public transport, planting trees, energy-efficient homes ; national governments can set carbon taxes, subsidise renewables ; • Balance: international agreements are often not binding or enforced – some countries (large emitters) do not meet targets ; adaptation (flood defences, drought-resistant crops) is carried out locally ; • Mitigation (reducing emissions) vs adaptation (coping with change) – both needed ; • Judgement: supported conclusion about the extent of agreement, using evidence ;			

Question	Answers	Extra information	Mark	AO / Spec. Ref.
	SPaG (3 marks) – award separately: **High performance (3)**: Learners spell and punctuate with consistent accuracy and consistently use rules of grammar; they use a wide range of specialist terms adeptly and with precision. **Intermediate performance (2)**: Learners spell and punctuate with considerable accuracy and use rules of grammar with general control; they use a good range of specialist terms with facility. **Threshold performance (1)**: Learners spell and punctuate with reasonable accuracy and use rules of grammar with some control; they use a limited range of specialist terms appropriately. **0 marks**: No marks awarded: no response or the spelling, punctuation and grammar is too weak, or the terminology is not relevant.			

Where marks are lost in Topic 1

Use this page after marking. Tick the ones that cost you marks, then redo those questions closed-book.

- ☐ **Name the margin and the process:** 'destructive margin' + 'oceanic plate subducts' + 'melts' + 'magma rises'. A diagram label is not an explanation.
- ☐ **Primary vs secondary effects:** primary happen immediately and directly (collapsed buildings); secondary happen later as a result (fires, disease, landslides, loss of jobs).
- ☐ **Immediate vs long-term responses:** immediate = rescue, shelter, aid; long-term = rebuilding, better building codes, monitoring.
- ☐ **Always use place detail** in case-study answers: name, date, magnitude/category, numbers of deaths, specific places and organisations.
- ☐ **Explain = develop:** every 'Explain' mark needs a point + 'so' / 'because' / 'which means'.
- ☐ **Graph questions:** quote figures with units from the graph and use words such as 'rose', 'peaked', 'fluctuated'. Show working for calculations.
- ☐ **9-mark evaluation:** include both sides, use named examples, and end with a clear judgement answering the actual statement (the command word 'To what extent' needs a conclusion).
- ☐ **Mitigation vs adaptation:** mitigation reduces the *causes* (emissions); adaptation helps people *cope* with the effects.
