GCSE GEOGRAPHY

Paper 1: Living with the physical environment

Topic 3: Physical landscapes in the UK

Practice questions in the style of AQA GCSE Geography (8035). Every question is original; the layout, command words, mark allocations (including levels-based 6- and 9-mark questions with SPaG) and mark scheme follow the real exam format. Figures and data are illustrative and simplified for practice; case-study facts in the mark scheme are summarised, so check them against your own case-study notes.

Time allowed	About 140 minutes (roughly 1 minute per mark)
Materials	For this paper you must have: a black pen, a pencil, a ruler, a calculator and (for some questions) a protractor.
Instructions	• Use black ink or black ball-point pen. Use pencil only for drawing. • Answer **all** questions. • You must answer the questions in the spaces provided. • Do all rough work in this book. Cross through any work you do not want to be marked. • Questions that carry a **SPaG** note are also marked for spelling, punctuation, grammar and the use of specialist terminology.
Information	• The maximum mark for this paper is **135**. • The marks for questions are shown in brackets. • Questions that start with the command word *Explain* need developed points (a point plus a reason or consequence). • 6- and 9-mark questions are marked by **levels**: aim to give a detailed, balanced and well-linked answer, using place-specific detail.

Name: _____ Date: _____ Mark: _____ / 135

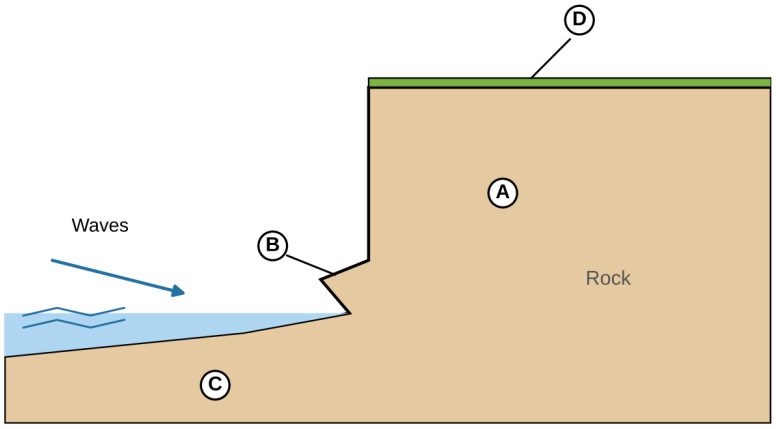

Section C: Physical landscapes in the UK

Answer all questions in this section.

0 1 This question is about coastal landscapes in the UK. **Figure 1** shows a cliff on a coastline.

0 1 . 1 Name landform **B** and landform **C** on Figure 1. **[2 marks]**

Figure 1

0 1 . 2 Which **one** of these is a type of **erosion**? **[1 mark]**

*Tick **one** box.*

- ☐ deposition
- ☐ longshore drift
- ☐ hydraulic action
- ☐ transportation

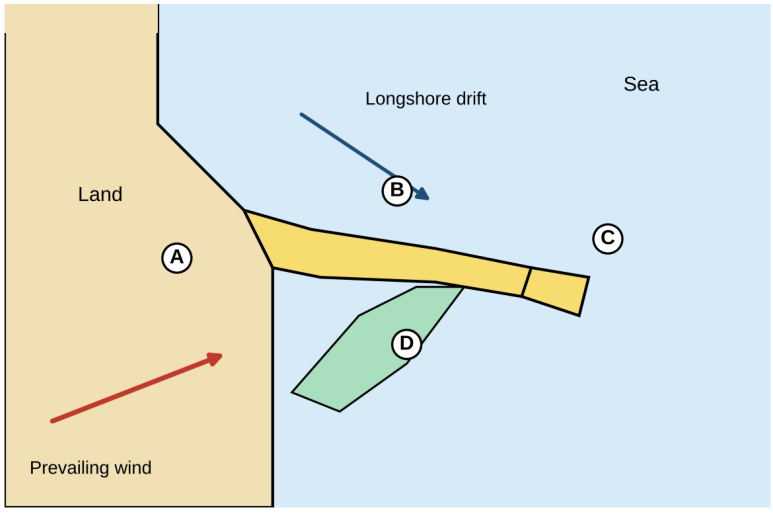

0 1 . 3 Describe how **abrasion** wears away a coastline. **[2 marks]**

0 1 . 4 Explain how a wave-cut platform forms. **[4 marks]**

0 1 . 5 Explain how **weathering** and **mass movement** help to shape the cliff in Figure 1. **[4 marks]**

0 1 . 6 **Figure 2** shows a spit. Name landforms **B** and **D**. **[2 marks]**

Figure 2

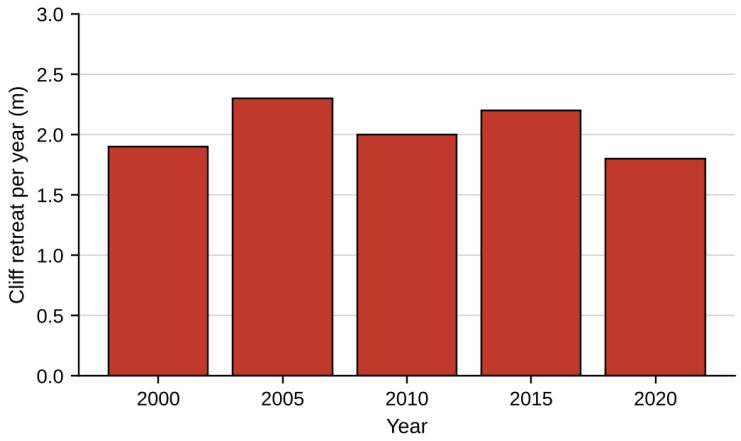

0 1 . 7 Explain how a spit is formed. **[4 marks]**

0 1 . 8 The coastline of the UK is made up of different types of rock. Explain why some parts of the coast erode faster than others. **[3 marks]**

0 2 This question is about coastal management. **Figure 3** shows cliff retreat at a stretch of coast.

0 2 . 1 Calculate the mean (average) cliff retreat per year shown in Figure 3. **[2 marks]**

Figure 3

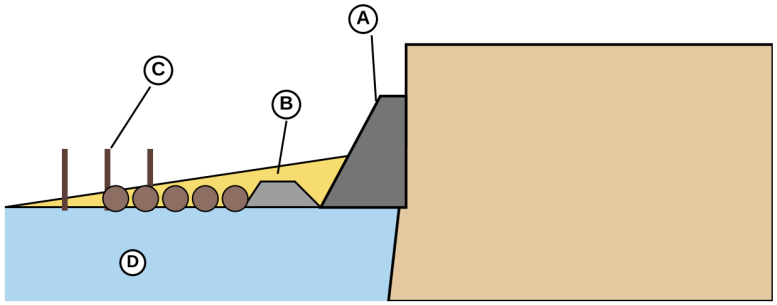

Answer = _____ m

0 2 . 2 The coastline retreats at about 2 m per year. How far would the cliff top retreat in 25 years? **[1 mark]**

Answer = _____ m

0 2 . 3 **Figure 4** shows some coastal defences. Name the type of defence labelled **A** and the type labelled **C**. **[2 marks]**

Figure 4

0 2 . 4 Explain how **rock armour** (rip-rap) protects the coast. **[2 marks]**

0 2 . 5 Give **one** advantage and **one** disadvantage of hard engineering such as a sea wall. **[2 marks]**

0 2 . 6 Describe **one** soft engineering strategy used to manage coastal erosion. **[2 marks]**

0 2 . 7 Explain why some places are allowed to erode (managed retreat) rather than being defended. **[4 marks]**

0 2 . 8 For a coastal management scheme you have studied (e.g. Lyme Regis or Holderness), assess its effectiveness. Name the place. **[6 marks]**

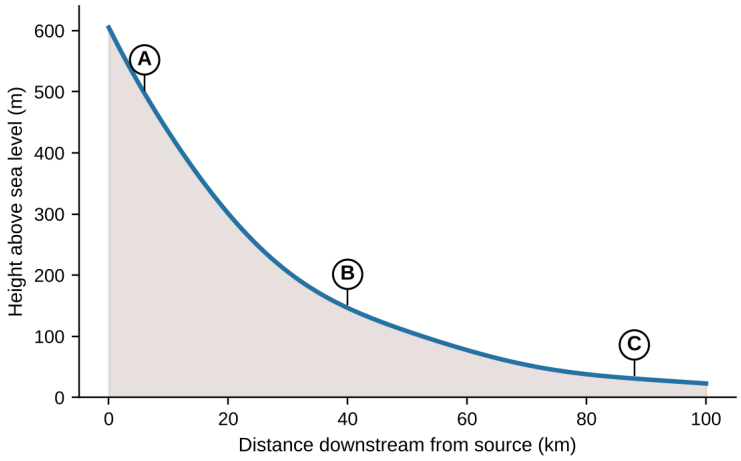

0 2 . 9 **'Hard engineering is the best way to protect UK coastlines.'** To what extent do you agree with this statement? **[9 marks] + [3 marks] SPaG**

Spelling, punctuation, grammar and use of specialist terminology [3 marks]

0 3 This question is about river landscapes in the UK. **Figure 5** shows the long profile of a river.

0 3 . 1 Describe the long profile of the river in Figure 5. **[3 marks]**

Figure 5

0 3 . 2 Which **one** of these is most likely to be found at point **A**? **[1 mark]**

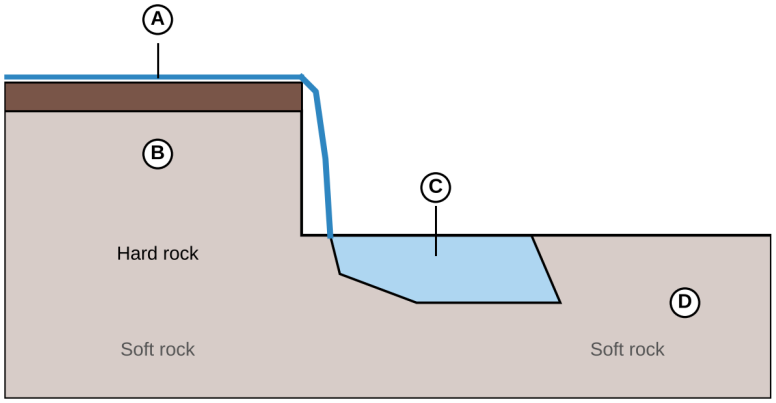

*Tick **one** box.*

- ☐ floodplain
- ☐ meander
- ☐ V-shaped valley
- ☐ levée

0 3 . 3 Explain why the river valley at point **C** is wide and flat. **[3 marks]**

0 3 . 4 **Figure 6** shows a waterfall. Describe how a waterfall forms. **[4 marks]**

Figure 6

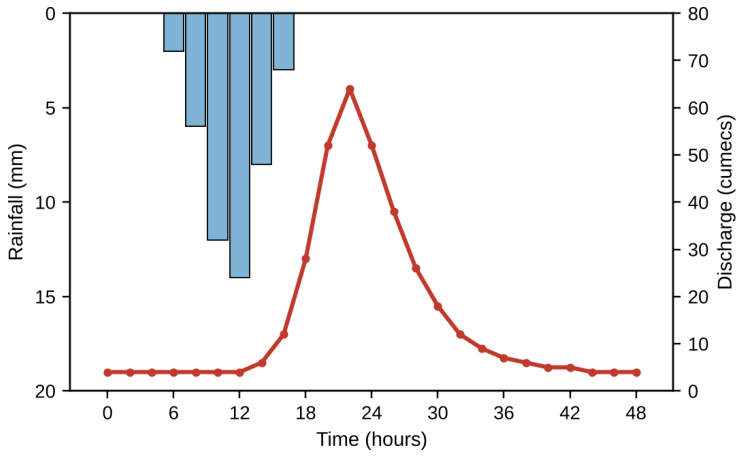

0 3 . 5 Explain how **erosion** and **deposition** help to form a meander and then an ox-bow lake. **[6 marks]**

0 3 . 6 Name **two** types of transportation of material in a river. **[2 marks]**

0 4 This question is about river flooding. **Figure 7** is a flood hydrograph for a river after a period of heavy rain.

0 4 . 1 State the peak discharge shown in Figure 7. **[1 mark]**

Figure 7

0 4 . 2 Calculate the lag time between the highest rainfall and the peak discharge. **[2 marks]**

Answer = _____ hours

0 4 . 3 Describe what happens to the discharge shown in Figure 7 after the peak. **[2 marks]**

0 4 . 4 Explain how **two** physical factors can cause a short lag time. **[4 marks]**

0 4 . 5 Explain how **urbanisation** can increase the risk of flooding. **[3 marks]**

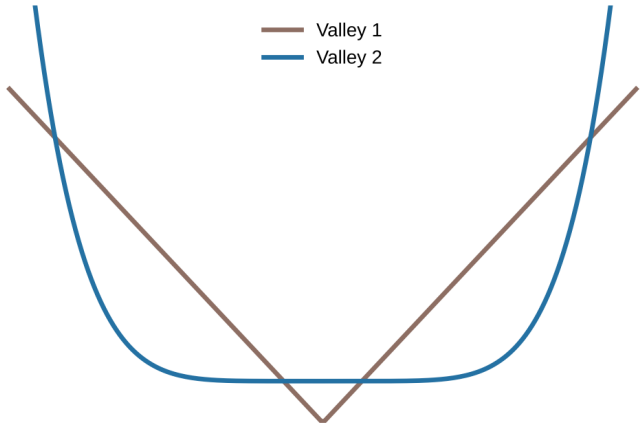

0 4 . 6 Describe **one** hard engineering and **one** soft engineering strategy used to reduce flooding. **[4 marks]**

0 4 . 7 For a flood management scheme you have studied (e.g. Banbury or the River Tees), explain the reasons for the scheme and its social, economic and environmental effects. **[6 marks]**

0 5 This question is about glaciated upland areas in the UK. **Figure 8** shows two valleys. One was formed by a river and one by a glacier.

0 5 . 1 Which valley, **1** or **2**, was formed by a glacier? Give **one** reason for your answer. **[2 marks]**

Figure 8

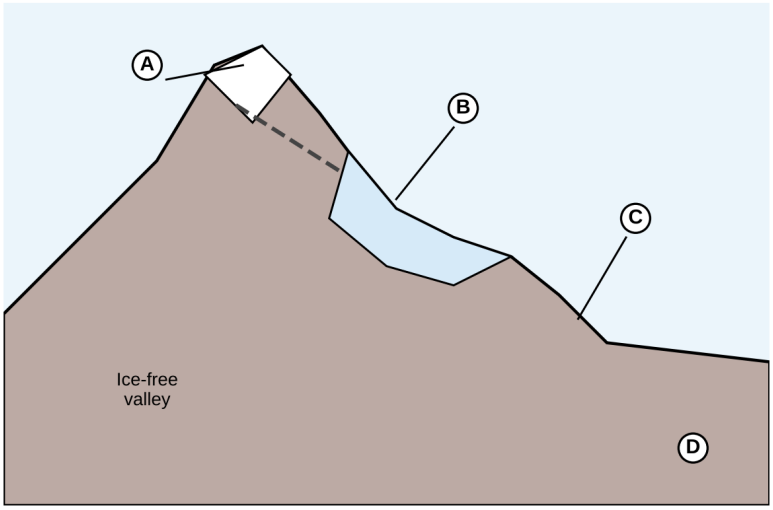

0 5 . 2 Describe how the glacial landscape in the UK was formed. Use the term **glacial period**. **[2 marks]**

0 5 . 3 Explain how **freeze–thaw weathering** operates in glaciated areas. **[3 marks]**

0 5 . 4 **Figure 9** shows glacial features. Name landform **A** and landform **B**. **[2 marks]**

Figure 9

0 5 . 5 Explain how a corrie is formed. **[4 marks]**

0 5 . 6 Explain how a ribbon lake or a truncated spur is formed. **[4 marks]**

0 5 . 7 Explain how **two** glacial landforms (e.g. a drumlin or a moraine) are formed by deposition. **[4 marks]**

0 5 . 8 Explain how a glaciated upland area (e.g. the Lake District) is used for tourism, and the conflicts this causes. **[6 marks]**

0 5 . 9 **'The Lake District National Park can be both used by tourists and protected.'** To what extent do you agree with this statement? **[9 marks] + [3 marks] SPaG**

Spelling, punctuation, grammar and use of specialist terminology [3 marks]

END OF QUESTIONS

MARK SCHEME – Topic 3: Physical landscapes in the UK

How to use this mark scheme: mark your own work in a different colour. A semicolon (;) separates marking points and each is worth one mark unless stated. A slash (/) separates alternative answers that are equally acceptable. Words in brackets are not needed to gain the mark. **Allow** = acceptable; **Ignore** = neither credited nor penalised; **Do not accept** = contradicts or spoils the answer. Marks are for the *geography*, not the wording.

Question	Answers	Extra information	Mark	AO / Spec. Ref.
01.1	B: wave-cut notch ; C: wave-cut platform ;		2	AO1 3.1.3.1
01.2	hydraulic action (the force of the water)	Tick box 3 is correct.	1	AO1 3.1.3.1
01.3	waves pick up pebbles / sand / rocks and hurl / throw them at the cliff (base) ; which scrape / rub / wear away the rock ;		2	AO1 3.1.3.1
01.4	waves attack the base of the cliff between high and low tide by hydraulic action and abrasion ; a wave-cut notch is formed ; the rock above the notch becomes unsupported and collapses (mass movement / rockfall) ; the cliff retreats, leaving a gently sloping rock platform (the wave-cut platform) ; process is repeated, cliff retreats inland ;	Any four. Notch → collapse → retreat is the sequence needed for full marks.	4	AO1/AO2 3.1.3.1
01.5	freeze-thaw weathering: water enters cracks, freezes and expands, widening the crack and breaking off pieces ; chemical weathering (e.g. slightly acidic rainwater dissolves limestone) weakens the rock ; this weakens the cliff so loose material can fall / slide (rockfall, landslide, slumping) ; heavy rainfall saturates soft cliffs so they slump / slide down ; material falls to the base of the cliff and is eroded, so the cliff retreats and its profile changes ;		4	AO2 3.1.3.1
01.6	B: spit ; D: salt marsh / mud flats / lagoon ;	B = spit; C = recurved end / hook; D = salt marsh.	2	AO1 3.1.3.1
01.7	longshore drift moves sand / shingle along the coast in the direction of the prevailing wind (zig-zag movement) ; waves approach at an angle (swash) and the backwash returns at 90° ; where the coastline changes direction / at a river mouth, the material continues in the same direction and deposits ; the deposited material builds out into the sea as a ridge, with the end curved by a change in wind direction / waves (recurved end) ; sheltered water behind the spit allows a salt marsh to form ;	Credit labelled sketch diagrams.	4	AO2 3.1.3.1

Question	Answers	Extra information	Mark	AO / Spec. Ref.
01.8	soft rocks (clay / sand / boulder clay) erode faster than hard rocks (granite / chalk / limestone) ; rocks with joints, faults and cracks are eroded more easily ; headlands of resistant rock stick out; bays form where rock is weaker ; exposed to strong waves / long fetch / powerful destructive waves ;		3	AO2 3.1.3.1
02.1	1.9 + 2.3 + 2.0 + 2.2 + 1.8 = 10.2 ; 10.2 ÷ 5 = 2.04 (m) ;	Allow 2.0–2.1. Correct answer with no working scores 2.	2	AO4 3.1.3.1
02.2	50 (m)		1	AO4 3.1.3.1
02.3	A: sea wall ; C: groynes ;	B = rock armour (rip-rap). Accept 'wooden barriers' for groynes.	2	AO1 3.1.3.2
02.4	large boulders placed at the foot of the cliff ; absorb / break up the energy of the waves, reducing erosion ;		2	AO1 3.1.3.2
02.5	advantage: effective at protecting land / buildings ; long lasting ; reflects wave energy ; disadvantage: very expensive to build and maintain ; ugly / spoils the view ; can increase erosion further along the coast ;		2	AO1 3.1.3.2
02.6	beach nourishment: sand / shingle added to the beach to absorb wave energy ; dune regeneration: planting marram grass / fencing to stabilise dunes ; managed retreat: allowing the sea to flood low-lying land to create a salt marsh ; (any) described with how it works ;		2	AO1 3.1.3.2
02.7	the cost of defences is greater than the value of the land / buildings protected (cost–benefit) ; low-value farmland / few people live there ; creates salt marsh which absorbs wave energy and provides a wildlife habitat ; cheaper and more sustainable in the long term ; hard defences cause erosion elsewhere ;		4	AO2 3.1.3.2
02.8	**Level 3 (5–6 marks)**: Detailed, accurate and relevant knowledge and understanding of the topic. Clear, well-developed and logically structured explanation/analysis with specific links made between ideas (and a use of place detail or the resources where asked). **Level 2 (3–4 marks)**: Some relevant and accurate knowledge and understanding. Some explanation/analysis, but developed unevenly or with limited links. Some use of detail or the resources. **Level 1 (1–2 marks)**: Basic, general knowledge with limited accuracy or relevance. Simple statements; little or no explanation or use of detail. **0 marks**: No relevant content.		6	AO1/AO3 3.1.3.2

Question	Answers	Extra information	Mark	AO / Spec. Ref.
	Indicative content (credit any other valid geography, and place-specific detail): • named place and scheme (e.g. Lyme Regis: sea wall, rock armour, beach recharge, cliff stabilisation by drainage and pinning) ; • cost: e.g. £20 million for Lyme Regis phases ; • benefits: the town and tourism protected / rate of erosion slowed ; beach attracts visitors ; • problems: expensive ; visual impact ; erosion may increase elsewhere / sediment starved ; • social, economic and environmental balance: some residents lose out ; • evaluation / judgement: whether benefits outweigh costs ;			
02.9	**Level 3 (7–9 marks)**: Detailed, accurate knowledge and understanding of the topic with a well-developed, balanced and logical argument. A clear, supported **evaluation/judgement** that is based on evidence (and specific place detail or the resources where asked). Any conclusion is fully justified. **Level 2 (4–6 marks)**: Some accurate knowledge and understanding. Some development of ideas with evidence; the judgement/evaluation is partial, unbalanced or not fully supported. **Level 1 (1–3 marks)**: Limited knowledge and understanding. Simple statements with little development; a judgement, if any, is unsupported. **0 marks**: No relevant content.		9 + 3 SPaG	AO1/AO2/AO3 3.1.3.2
	Indicative content (credit any other valid geography, and place-specific detail): • Agree: sea walls and rock armour protect homes and businesses and last for many years ; reduces erosion at that place ; essential for high-value land (towns, roads, power stations) ; • Disagree: very expensive to build (£ thousands per metre) and maintain ; can look ugly and block access to the beach ; may speed erosion elsewhere (terminal groyne syndrome / downdrift) ; • Disagree: soft engineering (beach nourishment, dune regeneration) is cheaper, more natural and more sustainable ; managed retreat creates habitats ; • Balance: best choice depends on the value of the land and rate of erosion ; mixed approach (Shoreline Management Plans: hold the line, managed realignment, no active intervention) ; • Evaluation: supported conclusion using a named example (e.g. Holderness: hard defences at Withernsea vs unprotected cliffs, Lyme Regis) ;			

Question	Answers	Extra information	Mark	AO / Spec. Ref.
	SPaG (3 marks) – award separately: **High performance (3)**: Learners spell and punctuate with consistent accuracy and consistently use rules of grammar; they use a wide range of specialist terms adeptly and with precision. **Intermediate performance (2)**: Learners spell and punctuate with considerable accuracy and use rules of grammar with general control; they use a good range of specialist terms with facility. **Threshold performance (1)**: Learners spell and punctuate with reasonable accuracy and use rules of grammar with some control; they use a limited range of specialist terms appropriately. **0 marks**: No marks awarded: no response or the spelling, punctuation and grammar is too weak, or the terminology is not relevant.			
03.1	height falls with distance / river drops from about 600 m to near sea level (about 20 m) ; gradient is steepest in the upper course (A) ; profile is concave / gradient gets gentler downstream ; figures with units used ;		3	AO3 3.1.3.3
03.2	V-shaped valley	Tick box 3 is correct (upper course).	1	AO2 3.1.3.3
03.3	lateral erosion has widened the valley ; meanders migrate (shift) across the floodplain by erosion and deposition ; floods deposit silt / alluvium on the floodplain, building up a flat surface ;		3	AO2 3.1.3.3
03.4	hard rock overlies softer rock ; the soft rock is eroded faster (by hydraulic action and abrasion) than the hard rock ; creating a step / overhang ; the overhanging hard rock is undercut and eventually collapses ; a plunge pool forms at the base by erosion and the waterfall retreats upstream, forming a gorge ;	Accept labelled diagrams.	4	AO1/AO2 3.1.3.3

Question	Answers	Extra information	Mark	AO / Spec. Ref.
03.5	**Level 3 (5–6 marks)**: Detailed, accurate and relevant knowledge and understanding of the topic. Clear, well-developed and logically structured explanation/analysis with specific links made between ideas (and a use of place detail or the resources where asked). **Level 2 (3–4 marks)**: Some relevant and accurate knowledge and understanding. Some explanation/analysis, but developed unevenly or with limited links. Some use of detail or the resources. **Level 1 (1–2 marks)**: Basic, general knowledge with limited accuracy or relevance. Simple statements; little or no explanation or use of detail. **0 marks**: No relevant content.	Credit annotated diagrams.	6	AO1/AO2 3.1.3.3
	Indicative content (credit any other valid geography, and place-specific detail): • meander: flow is fastest on the outside of the bend, so there is erosion (river cliff) ; • slower flow on the inside of the bend, so deposition (slip-off slope / point bar) ; • the meander gets bigger over time (lateral erosion) ; • the neck between two meanders narrows ; • in a flood the river breaks through the neck (cuts a new straight channel) ; • deposition seals off the old meander loop, leaving an ox-bow lake ;			
03.6	traction ; saltation ; suspension ; solution ;	Any two.	2	AO1 3.1.3.3
04.1	64 (cumecs)	Allow 62–66. Unit not required.	1	AO3 3.1.3.4
04.2	peak rainfall at hour 12 (14 mm) ; peak discharge at hour 22 ; 10 (hours) ;	Allow 8–12 hours. Lag time = time between peak rainfall and peak discharge.	2	AO4 3.1.3.4
04.3	falls (gradually / more slowly than it rose) ; from about 64 to 4 cumecs by hour 46 / returns to base flow ;		2	AO3 3.1.3.4
04.4	steep slopes: water runs off quickly into the river ; impermeable rock / saturated ground: water cannot soak in, so surface run-off is high ; heavy / prolonged rainfall means ground becomes saturated ; small / circular drainage basin: water reaches the river at the same time ; lack of vegetation (less interception) ;	Two factors, each with 1 mark for the factor and 1 for the explanation.	4	AO2 3.1.3.4

Question	Answers	Extra information	Mark	AO / Spec. Ref.
04.5	tarmac / concrete / roofs are impermeable, so water cannot infiltrate ; drains and sewers carry water quickly to rivers ; this increases surface run-off, reducing lag time and increasing peak discharge ;		3	AO2 3.1.3.4
04.6	hard: dams and reservoirs hold back water / flood walls and embankments increase channel capacity / straightening or deepening the channel ; how it helps (e.g. dam: stores water and releases it slowly) ; soft: flood plain zoning (no building on high-risk areas) ; afforestation (trees intercept rainfall) ; river restoration (re-meandering) ; flood warnings ; how it helps ;		4	AO1 3.1.3.4
04.7	**Level 3 (5–6 marks)**: Detailed, accurate and relevant knowledge and understanding of the topic. Clear, well-developed and logically structured explanation/analysis with specific links made between ideas (and a use of place detail or the resources where asked). **Level 2 (3–4 marks)**: Some relevant and accurate knowledge and understanding. Some explanation/analysis, but developed unevenly or with limited links. Some use of detail or the resources. **Level 1 (1–2 marks)**: Basic, general knowledge with limited accuracy or relevance. Simple statements; little or no explanation or use of detail. **0 marks**: No relevant content.		6	AO1/AO2 3.1.3.4
	Indicative content (credit any other valid geography, and place-specific detail): • named place and scheme (e.g. Banbury, Cherwell: flood storage area, earth embankments, flood wall, improved defences; £18 million) ; • reasons: floods in 1998, 2007 and 2012 damaged homes and businesses, risk to the railway / M40 ; • social: homes and people protected ; less stress and disruption / flood warnings ; • economic: protects businesses and jobs; cost of scheme versus damage prevented ; • environmental: loss / change of habitats for wildlife ; flood meadows can create wetlands ; • judgement of whether the benefits outweigh the costs ;			
05.1	2 ; U-shaped / steep sides and flat floor (wide) ;	Reason must refer to the shape. Valley 1 is a V-shaped river valley.	2	AO3 3.1.3.5
05.2	during the last glacial period (ice age) ice sheets / glaciers covered much of upland Britain ; which eroded and shaped the land as the ice moved downhill ;		2	AO1 3.1.3.5

Question	Answers	Extra information	Mark	AO / Spec. Ref.
05.3	water gets into cracks in the rock ; at night water freezes and expands, widening the crack ; repeated over time, pieces break off (scree) ;		3	AO1 3.1.3.5
05.4	A: pyramidal peak ; B: corrie (cirque) ;		2	AO1 3.1.3.5
05.5	snow collects in a hollow on a north / east-facing slope and turns to ice ; the ice moves by rotational slip, deepening the hollow by abrasion ; plucking steepens the backwall ; when the ice melts, a steep-sided armchair-shaped hollow remains, often with a tarn (lake) ; freeze-thaw weathering on the backwall also helps ;		4	AO1/AO2 3.1.3.5
05.6	glacier moves down a V-shaped river valley and cuts through / erodes the spurs, leaving truncated spurs ; ice erodes by abrasion and plucking, making the valley deeper and wider (U-shape) ; ribbon lake: where softer rock is eroded more, a long narrow hollow is formed and fills with water ; (either landform with a clear process) ;		4	AO2 3.1.3.5
05.7	as the ice melts / the glacier retreats, it drops its load of rock (till) ; terminal moraine: ridge of material deposited at the furthest point reached by the glacier ; drumlin: streamlined hill, formed when ice moves over till and shapes it into a mound (rounded end faces up the valley) ; erratics: large boulders transported and dropped in a different rock type area ;	Any two landforms, each with 1 mark for the landform and 1 for the process.	4	AO2 3.1.3.5
05.8	**Level 3 (5–6 marks)**: Detailed, accurate and relevant knowledge and understanding of the topic. Clear, well-developed and logically structured explanation/analysis with specific links made between ideas (and a use of place detail or the resources where asked). **Level 2 (3–4 marks)**: Some relevant and accurate knowledge and understanding. Some explanation/analysis, but developed unevenly or with limited links. Some use of detail or the resources. **Level 1 (1–2 marks)**: Basic, general knowledge with limited accuracy or relevance. Simple statements; little or no explanation or use of detail. **0 marks**: No relevant content.		6	AO1/AO2 3.1.3.6

Question	Answers	Extra information	Mark	AO / Spec. Ref.
	Indicative content (credit any other valid geography, and place-specific detail): • named area e.g. the Lake District: scenery of lakes, mountains and corries attracts walkers / water sports ; • tourism creates income, jobs (hotels, cafés, outdoor shops) ; • farming, quarrying and forestry are other land uses ; • conflicts: traffic congestion on narrow roads ; footpath erosion ; litter ; • second homes push up house prices so locals are priced out ; noise on lakes (speed boats) vs peace for walkers ; • management: footpath repair, park-and-ride, speed limits on lakes, National Park planning rules ;			
05.9	**Level 3 (7–9 marks)**: Detailed, accurate knowledge and understanding of the topic with a well-developed, balanced and logical argument. A clear, supported **evaluation/judgement** that is based on evidence (and specific place detail or the resources where asked). Any conclusion is fully justified. **Level 2 (4–6 marks)**: Some accurate knowledge and understanding. Some development of ideas with evidence; the judgement/evaluation is partial, unbalanced or not fully supported. **Level 1 (1–3 marks)**: Limited knowledge and understanding. Simple statements with little development; a judgement, if any, is unsupported. **0 marks**: No relevant content.		9 + 3 SPaG	AO1/AO2/AO3 3.1.3.6
	Indicative content (credit any other valid geography, and place-specific detail): • Agree: National Park Authority manages visitors – footpath repair, car-parking charges, wardens ; tourism provides income to repair the damage ; • Agree: traffic management and public transport ; speed limits on Windermere ; planning rules restrict building ; • Disagree: at honeypot sites (e.g. Ambleside) there are huge numbers – traffic, litter, erosion ; footpaths such as Scafell Pike damaged ; • Disagree: second homes and holiday lets push up house prices ; local services lost ; jobs often low paid and seasonal ; • Evaluation: balance of income vs damage ; a conclusion with named evidence ;			

Question	Answers	Extra information	Mark	AO / Spec. Ref.
	SPaG (3 marks) – award separately: **High performance (3)**: Learners spell and punctuate with consistent accuracy and consistently use rules of grammar; they use a wide range of specialist terms adeptly and with precision. **Intermediate performance (2)**: Learners spell and punctuate with considerable accuracy and use rules of grammar with general control; they use a good range of specialist terms with facility. **Threshold performance (1)**: Learners spell and punctuate with reasonable accuracy and use rules of grammar with some control; they use a limited range of specialist terms appropriately. **0 marks**: No marks awarded: no response or the spelling, punctuation and grammar is too weak, or the terminology is not relevant.			

Where marks are lost in Topic 3

Use this page after marking. Tick the ones that cost you marks, then redo those questions closed-book.

- ☐ **Spell out the sequence:** landform questions (wave-cut platform, spit, waterfall, ox-bow lake, corrie) are marked on a *sequence of linked steps*. Use 'first… then… as a result…'.
- ☐ **Process names:** name the process (hydraulic action, abrasion, longshore drift, freeze–thaw, plucking) and explain what it does.
- ☐ **Annotated diagrams:** a labelled sketch can earn most of the marks on 4-mark landform questions – add a sentence for each label.
- ☐ **Hydrographs:** lag time = peak rainfall → peak discharge. Show your subtraction. Check the units on both axes.
- ☐ **Hard vs soft:** don't just say 'cheap/expensive'. Give *one* advantage, *one* disadvantage and who or what is affected.
- ☐ **Case-study detail:** name the place and give figures (cost, length of defences, year of flooding).
- ☐ **Landscape in the UK:** you need *one* coastal scheme, *one* river flood scheme and *one* glaciated upland area, each with 'who benefits / who loses'.
- ☐ **9-mark questions:** plan with two paragraphs (agree / disagree) then a conclusion, using named places.
